

About Climate Action Group

The PAP launched its new Climate Action Group (CAG) to consolidate and intensify the party's efforts to achieve a sustainable and liveable future for Singapore. The CAG is committed to taking decisive action against climate change, empowering communities, advocating for policy reforms, and fostering thought leadership to create meaningful and lasting change for future generations.

This initiative aligns with the #refreshPAP efforts, which aim to build common cause with all Singaporeans and to address emerging challenges, such as climate concerns, that cut across traditional demographic lines.

Sub-Committees

Chaired by Dr Koh Poh Koon and co-chaired by Louis Ng, the CAG will be structured into five sub-committees aligned with Singapore's Green Plan — City in Nature, Energy Reset/transition, Green Economy, Resilient Future, Sustainable Living.

- **City in Nature (Led by Nadia Ahmad Samdin)**
We seek to strike a balance - pushing for conservation of nature as part of our nation's heritage and preserving our key green, blue and brown spaces, while we build a liveable environment for Singaporeans to prosper and grow. We respect wildlife as part of our city, and engage different stakeholders to manage human-wildlife interactions, growing an active citizenry who plays a part in extending Singapore's natural capital.
- **Energy Reset/Transition (Led by Poh Li San)**
The transition to green energy supply and usage is the crux of Singapore's journey to net zero emission. We will propose policy changes to enable and incentivise adoption of green energy solutions for industrial, residential and transportation sectors. We will also propose recommendations to encourage the use of green energy options in the way we live, work, play and travel.
- **Green Economy (Led by Don Wee)**
We aim to promote sustainable economic growth strategies that align with Singapore's climate goals. Our focus is to develop policy recommendations and initiatives that support the country's transition to a green economy while ensuring social equity, economic resilience, and environmental sustainability.
- **Resilient Future (Led by Carrie Tan)**
We look at ways to keep Singapore full and cool – we welcome new knowledge, research, and collaborations to enhance our food security and energy sufficiency strategy. From exploring permaculture and nature-based technology in building and architecture, to transforming consumption mindsets and policy-thinking to respect planetary resource limits, we work towards building a regenerative and resilient Singapore that thrives amidst climate challenges and realities.

- **Sustainable Living (Led by Hany Soh)**

We welcome and support a collaborative approach to sustainable green living, bringing together the government, private organisations, and the community to create meaningful change. By raising awareness and introducing initiatives that inspire and support Singaporeans to adopt eco-friendly habits, we aim to build a culture of sustainability for current and future generations.
